About us

At Platinum SkinTech Ltd, established in England & Wales, our commitment to excellence drives us to become a leading distributor of premium aesthetic machines and skincare products across the UK and Ireland. We provide state-of-the-art solutions backed by our team's extensive industry expertise.

Our focus on quality is matched by comprehensive training and ongoing support, ensuring our clients can optimise the performance of our machines and deliver outstanding results. We prioritise understanding each client's unique needs, tailoring our services to foster long-term partnerships built on trust and collaboration.

Innovation is central to our mission, keeping us at the forefront of technological advancements in the aesthetic industry. We are dedicated to leading with integrity and supporting our clients' success.

PLATINUM CO2 FRACTIONAL LASER

The CO₂ Fractional Laser is an advanced resurfacing system designed for skin rejuvenation, scar reduction, and surgical precision. Its fractional technology ensures effective treatment with minimal downtime, making it ideal for skin clinics and aesthetic practices. The system supports multiple treatment modes including vaginal rejuvenation and surgical cutting.

Specifications

Wavelengths : 10600 nm

Power : 30 W

Work Mode: Scanning mode (Normal, Random, Midsplip), Single Pulse, Multiple Pulse, Continuous Wave.

Beam Delivery: 7 joints light arm

Light arm : 1.36m

Aiming Beam: Red diode laser (630~650nm ,≤5 mW)

Spot size : 0.05 mm(±10%)

Fractional Mode Pulse: Duration 0.1~1000ms , Interval 0.1~1000ms and Distance 0.2~2.6mm , Time 1~20th

Laser unfractionated : Single Pulse 0.1~100ms , Multiple Pulse 0.1~100ms , Continuous Wave 1~30W

Key Features

- ✓ Fractional Scanning with Adjustable Shapes & Sizes
- ✓ Multiple Treatment Modes: Fractional, Vaginal, Surgical
- ✓ Touchscreen Interface with Smart Control Panel
- ✓ Customizable Depth, Energy & Pulse Width Settings
- ✓ Minimized Downtime with Precise Thermal Control

Various Shapes, Handpieces and Gynecology Handpieces

Large Pore Removal

PLATINUM 3 IN 1

Our innovative system integrates Diode Laser and ND YAG technology, providing three versatile treatment options. Ideal for growing businesses, this system empowers you to offer your clients a range of services, including Hair Removal, Skin Rejuvenation with Carbon Peel, and Tattoo Removal, all from a single device

Key Features

Alex

Speed

YAG

Laser Hair Removal

Diode laser hair removal comes with a 755 + 808 + 1064 triple wavelength laser stack with semiconductors technology.

Carbon Laser Peel

We are committed to providing innovative solutions that will help create a better tomorrow for everyone.

Tattoo Removal

Laser tattoo removal is a non-invasive cosmetic procedure that uses high-powered lasers to break down the ink particles in a tattoo. The laser emits specific wavelengths of light that are absorbed by the tattoo ink, causing it to fragment into smaller pieces.

Before and After

ISCUPT PLUS

The iSculpt Plus combines advanced, clinically proven High-Energy Focused Electromagnetic Wave technology to deliver comfortable, noninvasive treatments for muscle growth and fat reduction.

Applications

BODY
CONTOURING

SKIN
TIGHTENING

ANTI-
CELLULITE

FAT
REDUCTION

Key Features

- ✓ The machine allows for short-term treatment of 20-30 minutes, with recommended sessions of 4 treatments spaced 2-3 days apart. The results can start to be noticeable within two to four weeks.
- ✓ It offers three working modes—Sport Mode, Gentle Mode, and Professional Mode—tailoring the intensity of the treatment according to user's needs.
- ✓ The machine operates with a magnetic wave energy of 0-7 Tesla, a power output of 4300W, and a frequency range between 1-100Hz. It features a 10.4-inch screen for control and comes with four treatment handles, allowing it to treat up to four areas simultaneously.

Before and After

SKIN CODE PRO

Advanced RF micro needling machine combines micro needling with radiofrequency technology to rejuvenate the skin. During the procedure, micro-injuries are created in the skin's surface while radiofrequency energy is delivered into deeper layers, stimulating collagen and elastin production

Applications

Wrinkles

Acne scars

Large Pores

Skin Texture

Key Features

➤ Advance Vacuum

The updated RF microneedling system integrates vacuum technology to enhance topical penetration. With a unique dual air chamber design, it effectively pushes topicals deeper into the skin. Enhanced tissue engagement ensures optimal air capture, while microneedles create channels for precise delivery of RF energy.

➤ Fractional Rf applicator

The fractional RF applicator of the Skincode Pro delivers targeted radiofrequency energy deep into the skin, stimulating collagen production and promoting skin tightening. This non-invasive technology allows for precise treatment of wrinkles and fine lines without the need for needles,

ALL FIT

All Fit combines two waves technologies in one platform.

A skin lifting and remodeling, multi skin layers targeting facial system through non-invasive ultrasonic technology

Oxy FU: High intensity focused ultrasound, for facial contouring; lifting from within the skin.

Oxy FX : High intensity local dynamic micro-massage, for promoting collagen, elastin synthesis, hydration, and complex skin problem management.

Key Features

HiFU Therapy

High intensity focused ultrasound for facial lifting, elasticity, wrinkles, facial contour management

HiLDM Therapy

High density multi-frequency ultrasound for collagen, elastin synthesis & waterful facial lifting care

Non-Surgical

Non-invasive, precise facial lifting

Customized Treatment

Combined usage of HiFU & HiLDM for customized treatment

'High-Intensity Focused Ultrasound'

By irradiating strong ultrasonic energy, it forms a thermal coagulation point on a specific area of deep tissue, resulting in the instant lifting of skin without damaging the epidermis.

- 50~65°C heat occurrence in skin tissue (Coagulative Necrosis)
- Induces collagen and elastin fiber resynthesis through contraction of specific tissues.
- Provides natural lifting & improved elasticity through non surgical method.

Localized Dynamic Micro-massage/wave

Provides solutions to complex skin problems by maintaining balance within the extracellular matrix (ECM) using the modulation stimulation of 4 different frequencies (1,3,10,17MHz).

- Ultrasound treatment of up to 4 frequencies available (5 programs for different skin types)
- Suitable for pre/post clinical treatment care
- Treatment of various skin concerns (skin aging, acne etc.)
- Skin treatment through the optimization of regenerative immune system

HYDRATE+

Hydrate + brings you latest technologies, which can solve almost all facial skin problems. It is the best choice for skin clinics and beauty salons. The instrument is equipped with many of the most commonly used treatment functions, including cleaning, hydrating, lifting and firming, sedation, dead skin removal and skin analysis.

Applications

Skin Analysis Deep Cleansing Skin Brightening Skin Hydration

Key Features

- ✓ HYDROGEN OXYGEN HYDRO DERMABRASION HANDLE
- ✓ COOL RF AND COLD HAMMER HANDLE
- ✓ POLYMER ATOMIZING SPRAY HANDLE
- ✓ ULTRASOUND INTRODUCING HANDLE
- ✓ BIPOLAR RF HANDLE
- ✓ HD SKIN DETECTION PROBE
